

THE MONARCH INITIATIVE

MONARCH HABITAT BUILD-A-BOX

Thank you for participating in building a Monarch Habitat. For more information about the Monarch Initiative please visit: themonarchinitiative.org

MATERIALS PER BOX KIT INCLUDE THE FOLLOWING:

7 1x6x2 pine treated wood plank without a logo

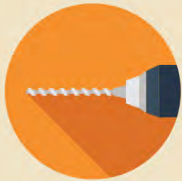

1 1x6x2 pine treated wood plank with logo

4 2x4x10 wood support beams

1
screw bit

1
drill bit

1
power drill

1
staple gun

40
2pt screws

1
pair of scissors

2
31in. weed barrier pieces

***BEFORE YOU BEGIN:** Ensure that all smooth planks face the exterior when screwing into support beam. The 1x6x2 plank with the Monarch Initiative logo will be the LAST piece to be added, so please put aside.

FULL SAIL
UNIVERSITY

DIRECTIONS:

1 Take (1) wood support beam and (1) pine treated wood plank and drill the two pieces together. Do this by pre-drilling a hole, and then drill the screw into the wood.

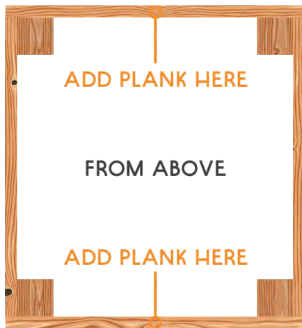

2 Take another support beam and adhere to the screwed plank on the other side using the same pre-drill method.

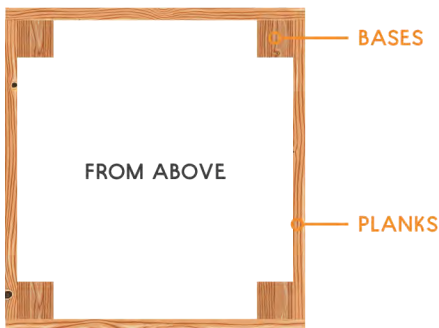

3 Repeat steps #1 and #2. This will create the other side of the box.

4 Take these bases and make them face each other and join the 2 pieces with a plank on each side. Place your screw either above or below where the original screw lives.

5 The box should now have 4 supports bases and 4 planks.

6 Start with any side and screw a plank above the bottom piece. This will create a second level to the box.

FROM THE SIDE

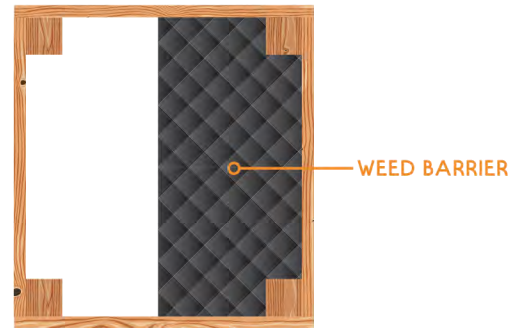

7 Repeat step #6 on 2 more sides.

8 The last plank piece should have the Monarch Initiative logo printed. Screw this into the final two beams.

9 Take one piece of the weed barrier and cover the sides and bottom of the box. Ensure that the gap on the sides of the board are covered and then staple to the inside of the box.

10 Take the second piece of weed barrier and repeat on the other side of the box, the pieces will overlap.

11 Awesome job! You built a home for some hungry monarchs!
